Toleranzschemata FIR- und IIR-Filter

Alternative Darstellung

 $H(e^{j\Omega})$ für reellwertige

linearphasige Filter

Ripple DB (FIR): $A_{DB} = 20 \log_{10} [(1 + \delta_{DB}) / (1 - \delta_{DB})]$

 $\approx 40 \log_{10}(1+\delta_{DB})$

Ripple DB (IIR): $A_{DB} = -20 \log_{10} (1 - \delta_{DB})$

Dämpfung SB: $A_{SB} = -20 \log_{10} \delta_{SB}$
